

METHODS & MYSTERIES: EVALUATING C&I ENERGY EFFICIENCY SAVINGS

Moderator: Michael Noreika, Puget Sound Energy

PAPERS:

Double Ratio Estimation: Friend or Foe?

Kathryn Parlin, West Hill Energy and Computing

Jenna Bagnall-Reilly, West Hill Energy and Computing

It's in the Water!—Improving Energy Savings Calculations from CA Water Conservation

Jeremy Eddy, Itron

Caroline Binkley, Itron

Chasing the Elusive Heat: Sherlock Holmes and the Startling Case of the CHP Protocol

George Simons, Itron

Stephan Barsun, Itron

SESSION SUMMARY:

The game is afoot! Using Holmesian powers of observation and logic, the authors at this session will present practical research on a variety of commercial and industrial evaluation topics. The research topics go beyond the elementary techniques and energy savings generally considered in commercial and industrial efficiency evaluations. Topics include evaluation sampling, the water-energy nexus, and combined heat and power systems.
