Global implementation of recommendations could save around 7.6 GtCO₂/yr by 2030; this is equivalent to 20% of global reference scenario energy related CO₂ emissions in 2030

Worldwide Implementation Now

Cross-sectoral

- Buildings
- Appliances
- Lighting
- Transport
- Industry

Energy utilities

2009 evaluation

2011 evaluation

Evaluation results

Conclusions

- Countries supportive of steps taken to improve the 2011 Evaluation
- Now creating baselines for non-member countries: Russia, Saudi Arabia, Malaysia
- But...no evaluation planned for 2013...
